AfyaX Partner Integration — UAT Report

TO
Uzima Exchange Ltd / Jugo Limited (Githuku)

FROM
Alfred Mulinge

CONTRACT
UZIMA-SYS-PLAN-001 v1.6 · Annex A

PARTNER PLATFORM
AfyaX

AFYAX ENGINEERING
David Sule (technical counterpart)

PORTAL
https://uzimax.onrender.com

API
https://uzimax.onrender.com/api/v1

1. Purpose

Confirm Phase 1 integration between **IOUX** and the **AfyaX** platform on **production** — live API calls and portal workflows. AfyaX-side engineering was coordinated with David Sule.

2. Environment

Portal / API	uzimax.onrender.com · `/api/v1`
Database	Production Postgres
AfyaX purchase URL (UAT)	`manager.smplystore.com/api/v1/iou/purchase`
Auth	Platform API key + portal JWT

3. What was built and passed

#	AREA	DETAIL	RESULT
1	Health	`GET /api/v1/health`	Pass
2	Parties	`POST /parties` — buyer & supplier; `uzimaPartyId`	Pass
3	Users	`POST /users` — portal users linked to orgs	Pass
4	IOU intake	`POST /external/invoices` → `iouRegistryId`	Pass
5	Status read	`GET /ious/{iouRegistryId}`	Pass
6	Opt-in	Supplier portal → assignment / pending settlement	Pass
7	Disbursement	Escrow release → `disbursed` / listing `sold`	Pass
8	Purchase webhook	IOUX → AfyaX on `iou.disbursed` (DvS)	Pass
9	Payment updates	`POST /webhooks/payment-update` HMAC	Configured
10	Portals	Admin / SPV / Supplier show live IOUs	Pass

4. Instruments exercised

IOU REGISTRY ID	IOUX OUTCOME	NOTES
`IOU-KE-2026-00003-0`	Opt-in → disbursed	Integration URLs corrected mid-UAT
`IOU-KE-2026-00004-9`	Lifecycle + webhook attempted	Partner listing-state follow-up
`IOU-KE-2026-00005-8`	Disbursed / sold; webhook delivered	Asking-price alignment follow-up
`IOU-KE-2026-00006-7`	Disbursed / sold; asking/face amount sent	Fresh open listing for clean partner accept

IOUX registry, assignment, disbursement, and outbound webhook delivery work end-to-end on production.

> **Verdict:** Phase 1 partner APIs are **built and live**. AfyaX technical UAT covering intake → opt-in → assignment → disbursement → purchase webhook **passed** on production.
